

### Concrete Trough Installation— Side View

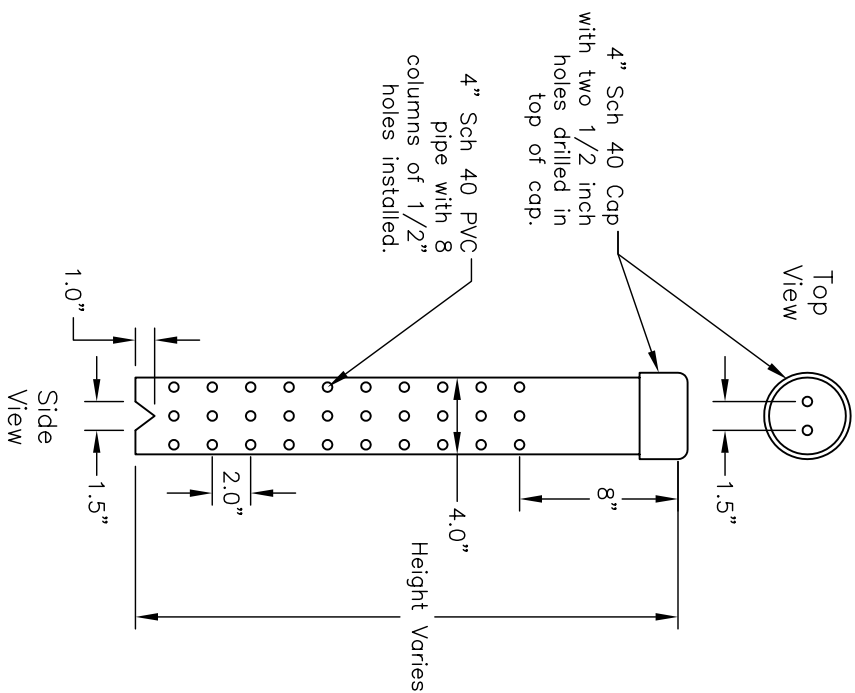

### Concrete Trough Installation—Top View

## Construction Notes

1. The watering facility shall be installed according to Virginia Watering Facility Standard (614).
  2. A valve shall be installed in the line to regulate flow to the trough. The valve should be installed in housing that is weatherproof, well drained, and easily accessible. It must also be protected from livestock. High quality ball valves are recommended. Valves installed in the field may be housed in water-meter boxes, concrete casing, or other suitable housing.
  3. All backfill for pipelines under the trough shall be compacted to the degree required to prevent caving after construction.
  4. The foundation under and around the trough shall be cleared of all material not suited for the subgrade, including sod. All loose surface soil shall be removed to undisturbed material.
  5. The trough site shall be free draining.
  6. A protective surface shall be placed around the trough according to Virginia Heavy Use Area Protection Standard (561). At the minimum, install geotextile fabric around the trough and place VDOT #1 stone six inches deep in a ten foot radius around the trough. Then place three inches of VDOT #57 or #21A as a cap. Other types of stone may be installed with approval of the designer.
  7. An overflow/drain line from the trough will be installed.
  8. Geotextile shall meet the minimum requirements in Virginia Construction Specification VA-795 Geotextiles, page VA-795-4.
  9. Seed all disturbed areas at the rates given in Virginia Construction Specification VA-706. Seeding: page VA-706-3
- \* If seeding is done outside recommended seeding dates, a nurse crop is to be used.
